

A Breach Detection Case Study

Leading Pharmaceutical Manufacturer

The Challenge

Regulatory compliance is central to the pharmaceutical industry, whilst the company is confident in managing their compliance with medical and manufacturing regulations, they didn't have the same inhouse expertise around cyber security.

They needed to be able to report any potential breaches to the ICO quickly, they needed breach detection.

The Solution

The ideal solution for the company was F-Secure's rapid detection and response service, supported by the Softwerx security operations centre.

The software measures user patterns, network activity and data transfers to spot and highlight suspicious activity for review by our experts.

Regulations say we need to report a breach inside 72 hours, we can report any breaches inside an hour.

The Outcome

As an expert in their field the company understood the value of hiring an expert to manage their cyber security. With the 30 minute service level agreement in place they are confident that they will be notified quickly of any breaches.

Softwerx's support means that they can act quickly to report, rectify and prevent and repeats.
