

An Internet Security Case Study

Disease Antibody Specialist

The Challenge

The company had staff working from multiple offices, sometimes from home, sometimes on the road. A 'bring your own device' culture and the move to the cloud compounded the problem. Bits of their security setup were being bypassed.

The benefits of staff being mobile and able to work from multiple devices were far too great to give up, so they needed a security solution suited to the new way of working.

The Solution

Softwerx worked with the company to perform a complete review of their security setup, their cyber security posture was fairly complete, what they were missing was internet security.

Zscaler's solution was the best option, providing the kind of cloud security they needed.

We'd moved to the cloud for speed and productivity, but our security was behind.

The Outcome

Now the company has Zscaler's internet security solution in place the IT team and the compliance team love the new cloud setup as much as the users do.

They are able to take advantage of all the convenience, cost and time savings of working in the cloud on whatever device they need to, without sacrificing their cyber security.
