

# An Internet Security Case Study

Global Youth Charity

## The Challenge

With their entire worldwide workforce working from multiple and changing locations, and accessing most applications via the cloud, the charity's previously effective on premise security measures were now being bypassed.

They needed a security solution that would protect them wherever their staff were, wherever the cloud servers were and cover the connections in between.

## The Solution

After reviewing the charity's requirements Softwerx recommended Zscaler, a comprehensive, borderless internet security service.

The advanced threat protection service protects against sophisticated malware and attacks without affecting the usability of the system for staff.

*There's no point locking the front door if the windows are open. The cloud was our window and Softwerx have secured it.*

## The Outcome

Staff and patrons are protected, the board are confident that they meet global compliance standards for data protection and the workforce can access what they need to when they need to.

The system has already stopped an attack that could otherwise have resulted in a major breach.
