

A Log Management (SIEM) Case Study

Animal Welfare Charity

The Challenge

The charity had invested significantly in cyber security; however, the result was a mixed bag of tools and solutions with no clear visibility of overlap or, more importantly, gaps.

They needed a single dashboard solution that would let them see all their security tools and review any issues easily.

The Solution

Softwerx recommended a unified, 'single pane of glass solution' – the AlienVault unified security management platform.

As an elite partner with AlienVault Softwerx can offer a standalone licensed product, but after discussion the charity decided that a managed service would be more cost effective than recruiting inhouse expertise.

For such a complicated system and process, I was expecting a complicated solution – but the AlienVault dashboard is really easy to use.

The Outcome

The charity are delighted, they can now see all their cyber security solutions in one place, review any issues and spot any gaps.

They have been able to source the right additional solutions to cover the precise vulnerabilities identified, and, in some cases, better utilise existing solutions to combat other issues.

They have also been able to reduce the total number of solutions they are using by identifying overlapping systems.
