

A Vulnerability Management Case Study

Leading South-East Based Building Contractor

The Challenge

The company was reviewing their security setup, from security cameras on site to their servers. When they came to cyber security they quickly realised they did not have the expertise they needed – it isn't their core business.

They didn't know what they needed to protect or how to protect it.

The Solution

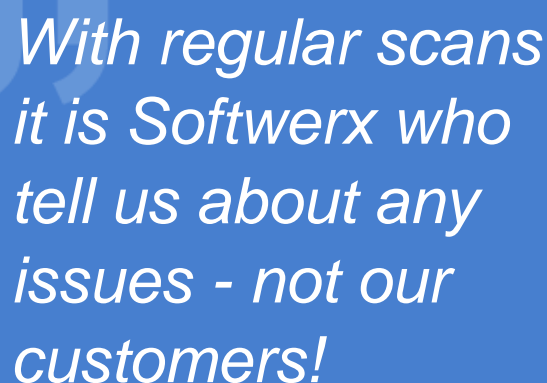

Softwerx completed a review of the company's networks and informed them that the first step in the process was a F-Secure Radar vulnerability scan.

They needed to find and classify the weaknesses in their internal, and customer facing infrastructure before they could secure it.

The Outcome

The vulnerability scans gave the company a snap shot of their current situation, enabling them to isolate and secure any weaknesses.

After the initial scan they set up a system for regular ongoing scans. The company wanted to be sure they were the ones to find any vulnerabilities, rather than a customer stumbling across it or an attacker finding and exploiting it.

A blue rectangular box containing a white quote. The quote is written in a white, italicized, sans-serif font. The quote is: "With regular scans it is Softwerx who tell us about any issues - not our customers!"

*With regular scans
it is Softwerx who
tell us about any
issues - not our
customers!*
