

A Next Generation Firewall Case Study

Independent Educational Trust

The Challenge

As an educational trust they had a special responsibility to ensure their pupils were able to use the internet safely and securely.

Their existing solution was a hotchpotch of different applications, many of which were expensive and out of warranty.

The Solution

The educational trust needed a firewall solution that would check encrypted traffic and secure their networks. Softwerx recommended them a next generation firewall solution from Fortinet.

The highest performing firewalls from Fortinet reduce complexity and protect the entire network from sophisticated threats.

Softwerx are knowledgeable and efficient - we have a new security partner!

The Outcome

The educational trust is now confident that they have closed a big gap in our security. They have not only ensured the security of their students and staff, they have also ticked an important box with their auditors and the PTA.

They have a scalable solution that protects them even in the increasing culture of 'bring your own device' amongst students, staff and administrators.
