

An Internet Security Case Study

Leading UK University

The Challenge

The educational arm of the university's business spans over 60 countries that all have over 450 employees. All these employees needed access our all the cloud applications from anywhere, in any country.

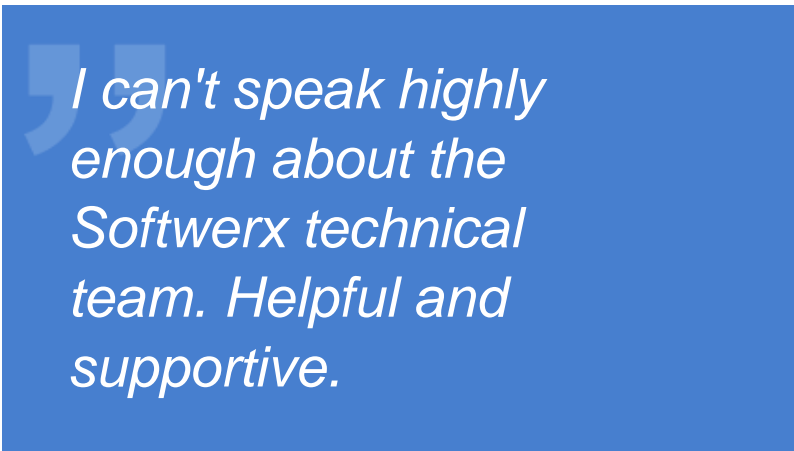

However with cyber security becoming a major issue for their duty of care team they needed to ensure complete defences without compromising legitimate access.

The Solution

The university asked Softwerx for options for a complete, scalable solution for internet security.

Zscaler internet access was the ideal solution, providing the complete security stack as a service from the cloud.

By choosing a direct-to-cloud security stack that protects both users and offices, the university was able to break free from costly appliances and network infrastructure.

A blue rectangular box containing a white quote. The quote is written in a white, italicized, sans-serif font. The quote is: "I can't speak highly enough about the Softwerx technical team. Helpful and supportive."

I can't speak highly enough about the Softwerx technical team. Helpful and supportive.

The Outcome

The university now has confidence in their network security at a global level. They are able to protect all their users, wherever they are, and they now have unlimited capacity when they need it.
