

An Email Security Case Study

International Law Firm

The Challenge

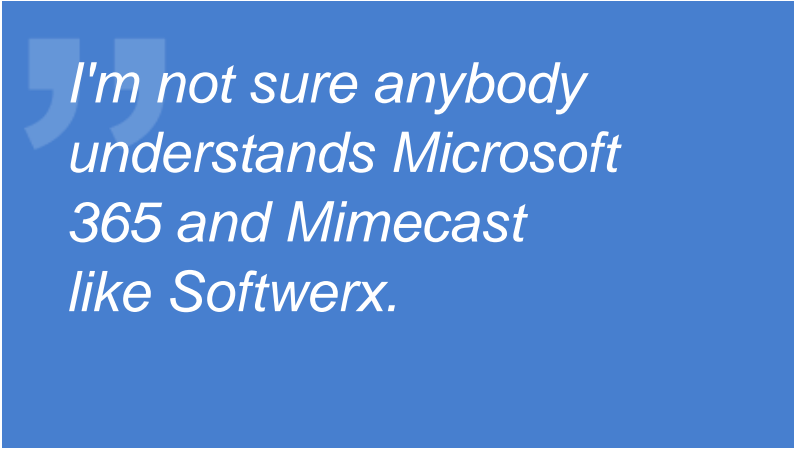

A disaster had alerted the board to the potential issues with email security. The firm had survived one email outage but it was clear they couldn't survive another major failure.

They needed a solution that would act as a fall back for their Microsoft 365 setup and keep them running even in a worst case scenario.

The Solution

Softwerx helped the business run a trial of the Mimecast mailbox continuity solution. They had the full solution up and running inside a month.

The continuity solution combines analysis and protection to prevent attacks, with a guarantee of continued email availability in the case of a problem.

A blue rectangular box containing a white quote. The quote is: "I'm not sure anybody understands Microsoft 365 and Mimecast like Softwerx." The text is in a white, italicized, sans-serif font. There are faint white quotation marks on the left side of the box.

"I'm not sure anybody understands Microsoft 365 and Mimecast like Softwerx."

The Outcome

Now they are confident that even if their email is forced offline, either directly by a cyberattack, or as a way to contain an existing threat that lands they will still be able to communicate and keep running.

As well as planning for the worst, the Mimecast solution also helps ensure it doesn't happen, by analysing incoming emails, enforcing sensitive data safeguards and inspecting outbound and internal emails to help quarantine any threats.
