

A Next Generation Firewall Case Study

Lightweight Structure Specialist

The Challenge

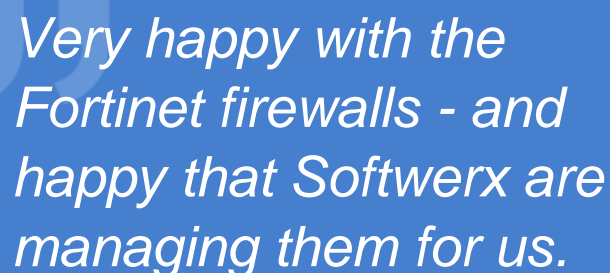

The business had an independent security assessment and were told that their biggest security concern should be their firewalls. The traditional firewalls they had in place were out of date and weren't fit to protect them from the complex, targeted attacks that businesses face these days.

With seven remote sites they were struggling to find the resources to complete the project in time.

The Solution

The business asked SoftwareX to run the implementation project for them.

Working out of hours to minimise disruption SoftwareX were able to turn the project around in time and on budget, leading to an ongoing request for firewall management from the business.

A blue rectangular box containing a white quote. The quote is written in a white, italicized, sans-serif font. The quote is: "Very happy with the Fortinet firewalls - and happy that SoftwareX are managing them for us."

*Very happy with the
Fortinet firewalls - and
happy that SoftwareX are
managing them for us.*

The Outcome

The managed service from SoftwareX has enabled the business to free up their own IT team to handle the user support they specialise in.

The independent assessors have now approved the new firewalls and the business is confident that they are protected across all seven sites, and anywhere in between as mobile staff connect from the road.
