

# An Internet Security Case Study

Market Leader in Radiation Therapy

## The Challenge

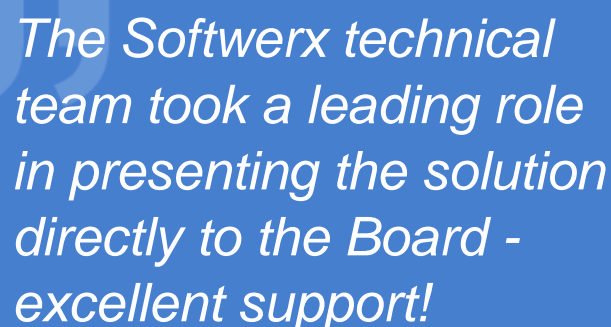

The company had migrated most of their servers and applications to the cloud, their users were mobile and connect straight to the cloud apps.

The whole system was no longer behind their security stack – they were exposed. Their physical security infrastructure was no longer enough to protect their users, and their intellectual property.

## The Solution

The company had already run a successful user security training program with SoftwareX so they asked for advice on Internet Security.

SoftwareX recommended Zscaler's secure cloud solution, designed to protect all your users wherever they are and all your data wherever it is kept.

A blue rectangular box containing a white quote. The quote is written in a white, italicized, sans-serif font and is preceded by a large white quotation mark.

*The SoftwareX technical team took a leading role in presenting the solution directly to the Board - excellent support!*

## The Outcome

The company now have the best cloud security software available. Their staff can access the apps they need from anywhere, the lab, the factory floor or on the road, with equal ease and security.

They can be confident that their online activity, patrolled by Zscaler, is even more secure than their factory, patrolled by security guards and cameras.
