

# A Log Management (SIEM) Case Study

London-Based Secondary School

## The Challenge

The school had been building their cyber security posture over time with multiple stake holders involved in the process.

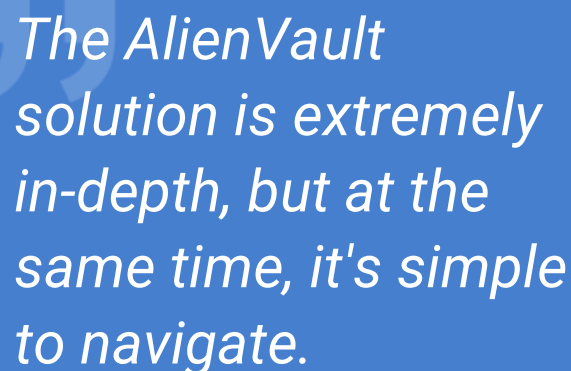

They ended up with an array of disparate technologies, staff and systems that seemed to be overlapping in places and made it difficult to spot any gaps in protection. They needed a single, unified approach to their cyber security needs.

## The Solution

Softwerx reviewed the school's cyber security setup and concluded that a unified, single-pane-of-glass option was the best solution.

The product recommended was the AlienVault Unified Security Management platform.

Softwerx works as an elite partner with AlienVault, we can offer a standalone licensed product, but in this case, the managed service was more appropriate.

A blue rectangular box containing a quote in white, italicized text. The quote is preceded by a large white quotation mark.

*The AlienVault solution is extremely in-depth, but at the same time, it's simple to navigate.*

## The Outcome

The school now have a comprehensive, single point of control and management for 97% of their cyber security requirements. The system provides them with effective, thorough knowledge and control of their IT environment.

As well as deterring cyber attack the new system has reduced the number, and expenditure on, software licenses by identifying overlap.
