

A Log Management Case Study

Global Provider of Alternative Asset Services

The Challenge

The business had always used an internal team, utilising inhouse tools. Historically this had been enough, but as the business grew and the complexity of the cyber security world increased it was no longer enough.

The modern hacker can spend weeks, or even months undetected while they search your networks, drives and folders to find what they are looking for. Without a log management solution, attacks can germinate and grow into catastrophic incidents.

Whilst this was the main driver behind the businesses need for a new system, they also needed to ensure they were compliant with all relevant regulation.

The Solution

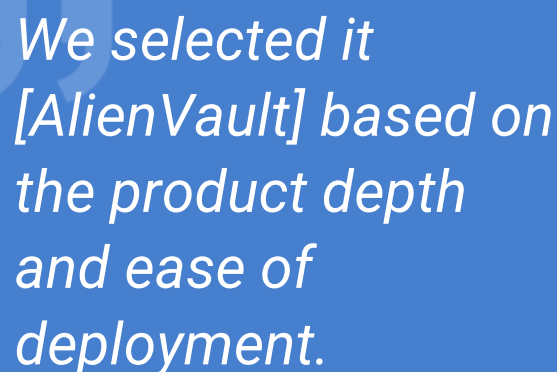

The business spent six months reviewing the market place. Softwerx clearly demonstrated the in depth technical knowledge and understanding of the marketplace they needed.

Together they chose AlienVault, largely due to the ease of deployment.

The Outcome

The business has incurred significant savings on internal systems and staff.

They have achieved regulatory certainty and now have access to a feature rich view of their threat landscape.
