

A Breach Detection Case Study

Leading Regional Law Firm

The Challenge

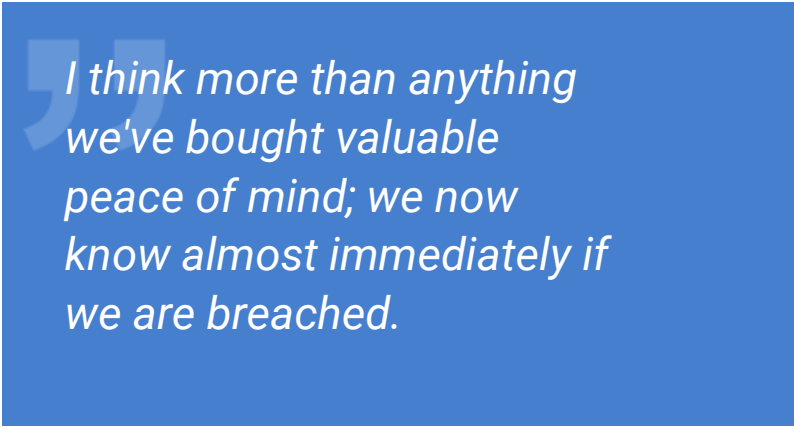

Article 33 of the GDPR states that organisations must have robust procedures in place to detect and investigate personal data breaches and report them within 72 hours. Without extensive visibility across your network and endpoints, it can take months to identify a breach.

The firm needed a breach detection capability to protect their data and comply. However, the breach detection marketplace is a complex one and they didn't know where to start.

The Solution

Softwerx started with an executive briefing to the board, explaining what breach detection is, why it's important and what the options were.

The firm chose the F-Secure Radar breach detection service. As they did not have the inhouse expertise to monitor and respond to any issues, they went for the Softwerx managed solution.

A blue rectangular box containing a white quote. The quote is: "I think more than anything we've bought valuable peace of mind; we now know almost immediately if we are breached."

I think more than anything we've bought valuable peace of mind; we now know almost immediately if we are breached.

The Outcome

More than anything the firm has bought a valuable peace of mind.

They know that should a breach occur their reputation is secure:

- Their valuable and sensitive customer data will be protected by immediate detection and remediation.
- They will ensure complete compliance with all relevant regulation by recording and reporting any issues within the mandated time period.
