

A Business Continuity Case Study

Leading UK Manufacturer of Hygiene Products

The Challenge

Disaster recovery has progressed far beyond simply planning for fire or flood risk, modern business continuity takes into account the much more likely risk of a cyber attack or fatal IT error.

The manufacturing sector ranks 3rd most likely to be attacked and 86% of attacks are targeted.

The companies Executive Team needed to know that their business could still operate in the event of some sort of disaster.

The Solution

Softwerx undertook a complete analysis of what the business was to achieve with a remit to get them into a robust and certain position.

The software solution that was recommended was Databarracks – the undisputed market leaders in business continuity in the UK. In conjunction with this Softwerx provided implementation and an ongoing managed service.

With Softwerx and Databarracks we have a continuity solution based on enterprise grade software that works.

The Outcome

The business has not only deployed an efficient business continuity solution, but they have also reduced their budget by consolidating the myriad of different solutions and technology they had in place.
