

Microsoft Security Assessment

A comprehensive and qualified security assessment of your Microsoft environment

Although many businesses are subscribing to one or more Microsoft plans, **many are not fully utilising their investment.** A professional Security Assessment from a qualified Microsoft consultant is the first place to start to identify the gaps in your security posture - and the licence benefits you may already have.

Office 365 is now used by more than **180 million users**, with over 100 million subscribing to the associated security package, **Enterprise Mobility + Security.**

Microsoft is the only company that offers an **end-to-end security** and compliance portfolio spanning identity, device endpoints, information, cloud applications and infrastructure.

If you make security hard work, people will work around it. With Microsoft, our employees benefit from a uniquely native and simplified experience.

Chief Information Security Officer, Global Wealth Management Company

Qualified Assessment

The Security Assessment is conducted by certified Microsoft professionals. It takes your organisation through the critical steps from engagement to assessment, identification of vulnerabilities, and solutions design. The outcome is a comprehensive Microsoft Security report that identifies best practice in your unique case and outlines a roadmap to apply it.

Making the case for a Microsoft Security Assessment

⚠ The Challenge

- A strong cyber security posture is now an essential requirement for every business.
- It can be complicated keeping track of such an expansive and fast-changing portfolio.
- Many businesses have holes in their cyber security posture or are over-spending unnecessarily.
- Breaches can and do occur without proper precautions.

✔ The Solution

- Microsoft offers a comprehensive end-to-end security solution.
- A comprehensive Security Assessment covers all of the critical aspects of your Microsoft environment.
- Get a qualified insight into your security status, to help build a roadmap for your business.
- Softwerx specialises in assisting businesses to leverage their existing Microsoft investment around Office 365 and Enterprise Mobility + Security.

Take Action

- The Microsoft Security Assessment typically takes two to three days to complete and includes a detailed technical evaluation of your complete Microsoft infrastructure and environment from a security perspective.
- Utilising your Microsoft Secure Score as a starting point, we review your approach to identity and access management, information protection, threat protection and endpoint protection. We also examine how you are securing applications in the cloud.
- The Assessment includes a detailed report, which can be used by your own IT team to roll out a clear security roadmap for the business. It can also be used at a board level to gain executive understanding and buy-in.
